

#Jenny

Finally I get this ebook, thanks for all these I can get now!

#Rio

Cool! I'am really happy

#Markus Jensen

I did not think that this would work, my best friend showed me this website, and it does! I get my most wanted eBook

#Hun Tsu

wtf this great ebook for free?!

#Che Salsa

My friends are so mad that they do not know how I have all the high quality ebook which they do not!

#Diego Butler

so many fake sites. this is the first one which worked! Many thanks

## Chapter 2: Motion in a Straight Line

### Concept Checks

21. d 22. b 23. b 24. c 25. a) b) 1 c) d 26. c 27. d 28. c 29. d

### Multiple-Choice Questions

21. c 22. c 23. a 24. b 25. a 26. a 27. d 28. c 29. a 218. b 221. b 212. d 233. c 234. d 235. a 236. c

### Conceptual Questions

217. Velocity and speed are defined differently. The magnitudes of average velocity and average speed are the same only when the direction of movement does not change. If the direction changes during movement, it is known that the net displacement is smaller than the net distance. Using the definition of average velocity and speed, it can be said that the magnitude of average velocity is less than the average speed when the direction changes during movement. Here, only Christine changes direction during her movement. Therefore, only Christine has a magnitude of average velocity which is smaller than her average speed.

218. The acceleration due to gravity is always pointing downward to the center of the Earth.

219. The car, before the brakes are applied, the time and velocity are  $t_1$  and  $v_1$  respectively. After the brakes are applied, the time and velocity are  $t_2$  and  $v_2$  respectively.

220. There are two cars, car 1 and car 2. The decelerations are  $a_1$ ,  $a_2$ ,  $a_3$  after applying the brakes. Before applying the brakes, the velocities of both cars are the same,  $v_1$ ,  $v_2$ . When the cars have completely
