### **The Tourmaline Group | Richard Dietrich | Springer**

Tourmaline (synonymous with tourmaline group) comprises trigonal borosilicates of the cyclosilicate superclass. The nomenclature was recently revised (Henry et al., 2011). Notes on the general formula: - Additional G and D site cations are reported substituting in minor amounts for the principal cations of these sites.

### **Tourmaline: Mineral information, data and localities.**

"Tourmaline" is the call of a huge group of boron silicate minerals that share a commonplace crystal structure and similar physical residences - but range quite in chemical composition. The huge variety of compositions, in conjunction with trace elements and shade facilities, causes tourmaline to arise in extra colours and shade mixtures than some other mineral institution.

### **Tourmaline Mineral Group Uses, Gemstone and Physical ...**

Scientifically, tourmaline is not a single mineral, but a group of minerals related in their physical and chemical properties. The mineral Elbaite is the member of the Tourmaline group that is

responsible for almost all the gem varieties. Three other members of the group - Schorl, Dravite and Liddicoatite, are seldom used as gemstones.

### **Tourmaline: The gemstone Tourmaline information and pictures**

The Health Benefits of Tourmaline Gemstone. Tourmaline emits far infrared radiation in the 4-14 micron wavelength. Electromagnetic radiation in the far infrared range is able to boost the immune system and promote detoxification. In fact, far infrared therapy is widely used in Japan by Kikohshi, people who heal by the laying of hands.
